

Blog-Post:

TODO:-

- Main Motto for this you've to post a blog
- First to create the table schemas, follow to the below images
 - i. Users - 1 admin & 1 user
 - ii. Categories - some
 - iii. Posts - some
- Routing Purpose use the **Fiber framework**
- Logging Purpose use the **logrus package**
- Password hashing use any Algorithm
- Basic structure of file Directory(Router,Handler,Service and Repository-Here Make a DB operation)
- Must Added the validation for the Required field. Use any packages

User side Dashboard :To List Blogs, categories, Archives

The screenshot shows a web browser displaying a blog application's user side dashboard. The browser's address bar shows the URL `http://acf.local/RTE/rteBlogs/index.cfm/user`. The dashboard has a blue header with a 'Blog' logo and navigation links for 'Home' and 'Login'. On the right side, there are two sidebar widgets: 'Categories' and 'Archives'. The 'Categories' widget lists 'AIR (2)', 'ColdFusion (4)', and 'Health (0)'. The 'Archives' widget lists 'August-2021' and 'September-2021'. The main content area displays a list of blog posts. Each post includes a title, a short description, the posting date, and tags. The first post is titled 'Adobe ColdFusion 2021 Docker image' and was posted on '14-Sep-2021' with tags '# AIR' and '# ColdFusion'. The second post is titled 'World Health Organization' and was posted on '15-Sep-2021' with tags '# AIR' and '# ColdFusion'. The third post is titled 'WHO' and was posted on '12-Aug-2021' with the tag '# ColdFusion'. Each post has an 'Add Comments' button next to it.

Adobe ColdFusion 2021 Docker image

I'm happy to be able to report that Adobe has finally started putting their ColdFusion Docker images onto Docker hub, for now at least CF2021, which I found was put there last week. We can expect more in time, I'm sure. For more info, read on. This is a follow-up to my post in July reporting how Adobe had announced then their plans to create a Dockerhub repo for ColdFusion, and how they had already started to post images to the Amazon ECR repo for ColdFusion.
